

PCT COOPERATION TREATY

PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

From the INTERNATIONAL BUREAU

To:

Commissioner
 US Department of Commerce
 United States Patent and Trademark
 Office, PCT
 2011 South Clark Place Room
 CP2/5C24
 Arlington, VA 22202
 ETATS-UNIS D'AMERIQUE
 in its capacity as elected Office

Date of mailing (day/month/year) 15 May 2001 (15.05.01)	
International application No. PCT/GB00/03373	Applicant's or agent's file reference PA9948-PCT
International filing date (day/month/year) 01 September 2000 (01.09.00)	Priority date (day/month/year) 03 September 1999 (03.09.99)
Applicant ROWLEY, Neil, J. et al	

1. The designated Office is hereby notified of its election made:

☒ in the demand filed with the International Preliminary Examining Authority on:
 12 March 2001 (12.03.01)

☐ in a notice effecting later election filed with the International Bureau on:

2. The election ☒ was

☐ was not

made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

The International Bureau of WIPO

Applicant's or agent's file reference PA9948-PCT				IMPORTANT NOTIFICATION	
International application No. PCT/GB00/03373		International filing date (day/month/year) 01/09/2000		Priority date (day/month/year) 03/09/1999	
Applicant NYCOMED AMERSHAM PLC et al.					

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/GB00/03373

I. Basis of the report

1. With regard to the **elements** of the international application (*Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)*):

Description, pages:

1-10 as originally filed

Claims, No.:

1-9 as originally filed

2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- ☐ the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

- ☐ the description, pages:
- ☐ the claims, Nos.:
- ☐ the drawings, sheets:

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/GB00/03373

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes:	Claims 1-9
	No:	Claims
Inventive step (IS)	Yes:	Claims
	No:	Claims 1-9
Industrial applicability (IA)	Yes:	Claims 1-9
	No:	Claims

**2. Citations and explanations
see separate sheet**

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB00/03373

SECTION V

1. References

D1: DE 198 01 861 A

D2: US-A-5 565 248

D3: DE 296 09 958 U1 was cited in the Application

- 1.1 **D1** discloses glass containers having an *internal coating* of e.g. SiO_2 ; the coating is prepared by e.g. *plasma enhanced chemical vapour deposition (PECVD)* and *prevents the leaching* of (metal)ions from the container-material into the (liquid) content (e.g. pharmaceutical products) (abstract; p. 2, l. 7f. and 12-25; p. 3, l. 66-68; p. 4, l. 3-6, l. 45-47, l. 67f.; p. 5, l. 8-33; claims 1, 2, 3, 6, 10, 11).
- 1.2 **D2** discloses plastic / metal containers having an *internal coating* of e.g. *silica*, which is *inert* to the packaged content (safe contact with e.g. food, beverages; desorption of packaging material components into the food is diminished; impermeability to polar and non-polar substances) (abstract; col. 1, l. 1-30; col. 2, l. 28-47; col. 5, l. 26-40; claim 1, 2).
- 1.3 **D3** discloses that glass containers having an *internal coating* of SiO_2 prepared by PCVD are useful for the storage of pharmaceutical or diagnostic solutions.

2. Novelty (Art. 33(2) PCT)

Compositions comprising a *diagnostic agent* in a *container* having a *silica coating on the inner surface* (the diagnostic agent comprising a *non-radioactive metal complex* or a *hyperpolarised material*) have not yet been disclosed in the available prior art.

Novelty can therefore be **acknowledged** for the subject-matter of claims 1-9.

INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET

International application No. PCT/GB00/03373

3. Inventive Step (Art. 33(3) PCT)

3.1 The problem to be solved, *derived from the description of the present application*, is that, when *diagnostics*, namely a *non-radioactive metal complex* or a *hyperpolarised material*, are stored in a container, metal ions from the container-material are leached into the product, which may *adversely affect* the product (impurity, toxicity and thus safety problems for products intended for human injection; promoting the co-precipitation of the product; affection of product imaging performance; increase of depolarisation of hyperpolarised material – decrease in lifetime).

3.2 In his letter of 03/12/01 in response to the written opinion, the Applicant points out 'that the problem has been stated in a way which partly anticipates the solution by identifying that metal ions leached from the glass container are the source of the problem'.

The Applicant contends that the problem would have to be formulated

'how to prevent intermittent impurity problems in diagnostic non-radioactive metal complex or hyperpolarised materials preparations pertaining to particulates in solution, batch to batch variability of unknown origin, and/or depolarisation'.

The Applicant herewith emphasizes that the **basis of the inventive step** involved in present application is the **formulation of the problem** (identification of the source underlying the problem).

However, *interactions between the container material and the content of the container* represent a **well-known problem**, and the storage of pharmaceuticals (or also food) in inert containers is a **matter of routine** in order to prevent such interactions. The skilled person would regard inert containers as a matter of course for the storage of diagnostics.

Thus, assessment of inventive step cannot be based on the identification of the problem as being obvious to the skilled person.

3.3 In any case, the solution of the present application resides in a composition comprising a *diagnostic agent* (being a *non-radioactive metal complex* or a *hyperpolarised material*) in a container which has a *silica coating on the inner surface*.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB00/03373

3.4 Containers having an inert silica coating on the inner surface (in order to prevent leaching of metal ions from the container-material) for the safe storage of pharmaceuticals (e.g. diagnostics (D3)), food and beverages, however, have *already been disclosed* in the prior art (see above-cited D1 and D2; citations in the application on p. 1 and 2, e.g. DE 29609958U1=D3), thus already providing a solution for the problem underlying the present application.

The storage of specific diagnostics, namely *a non-radioactive metal complex or a hyperpolarised material* in silica-coated containers in order to *prevent the adverse affection* of the diagnostics can be derived from the prior art (no unexpected effect) and thus only represents a *further possible use* of the *already known containers*.

3.5 Thus, an **inventive step** can presently **not be acknowledged** for the subject-matter of claims 1-9.

4. Industrial Applicability (Art. 33(4) PCT)

The requirements of industrial applicability are **fulfilled** for claims 1-9.

SECTION V

1. References

D1: DE 198 01 861 A

D2: US-A-5 565 248

D3: DE 296 09 958 U1 was cited in the Application

- 1.1 **D1** discloses glass containers having an *internal coating* of e.g. SiO_2 ; the coating is prepared by e.g. *plasma enhanced chemical vapour deposition (PECVD)* and *prevents the leaching* of (metal)ions from the container-material into the (liquid) content (e.g. pharmaceutical products) (abstract; p. 2, l. 7f. and 12-25; p. 3, l. 66-68; p. 4, l. 3-6, l. 45-47, l. 67f.; p. 5, l. 8-33; claims 1, 2, 3, 6, 10, 11).
- 1.2 **D2** discloses plastic / metal containers having an *internal coating* of e.g. *silica*, which is *inert* to the packaged content (safe contact with e.g. food, beverages; desorption of packaging material components into the food is diminished; impermeability to polar and non-polar substances) (abstract; col. 1, l. 1-30; col. 2, l. 28-47; col. 5, l. 26-40; claim 1, 2).
- 1.3 **D3** discloses that glass containers having an *internal coating* of SiO_2 prepared by PCVD are useful for the storage of pharmaceutical or diagnostic solutions.

2. Novelty (Art. 33(2) PCT)

Compositions comprising a *diagnostic agent* in a *container* having a *silica coating on the inner surface* (the diagnostic agent comprising a *non-radioactive metal complex* or a *hyperpolarised material*) have not yet been disclosed in the available prior art.

Novelty can therefore be **acknowledged** for the subject-matter of claims 1-9.

3. Inventive Step (Art. 33(3) PCT)

3.1 The problem to be solved, derived from the description of the present application, is that, when *diagnostics*, namely a *non-radioactive metal complex* or a *hyperpolarised material*, are stored in a container, metal ions from the container-material are leached into the product, which may *adversely affect* the product (impurity, toxicity and thus safety problems for products intended for human injection; promoting the co-precipitation of the product; affection of product imaging performance; increase of depolarisation of hyperpolarised material – decrease in lifetime).

3.2 In his letter of 03/12/01 in response to the written opinion, the Applicant points out 'that the problem has been stated in a way which partly anticipates the solution by identifying that metal ions leached from the glass container are the source of the problem'.

The Applicant contends that the problem would have to be formulated

'how to prevent intermittent impurity problems in diagnostic non-radioactive metal complex or hyperpolarised materials preparations pertaining to particulates in solution, batch to batch variability of unknown origin, and/or depolarisation'.

The Applicant herewith emphasizes that the **basis of the inventive step** involved in present application is the **formulation of the problem** (identification of the source underlying the problem).

However, *interactions between the container material and the content of the container* represent a **well-known problem**, and the *storage of pharmaceuticals* (or also food) in inert containers is a **matter of routine** in order to prevent such interactions. The skilled person would regard inert containers as a matter of course for the storage of diagnostics.

Thus, assessment of inventive step cannot be based on the identification of the problem as being obvious to the skilled person.

3.3 In any case, the solution of the present application resides in a composition comprising a *diagnostic agent* (being a **non-radioactive metal complex** or a **hyperpolarised material**) in a container which has a *silica coating on the inner surface*.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB00/03373

- 3.4 Containers having an *inert silica coating on the inner surface* (in order to prevent leaching of metal ions from the container-material) for the *safe storage* of *pharmaceuticals (e.g. diagnostics (D3))*, food and beverages, however, have *already been disclosed* in the prior art (see above-cited **D1** and **D2**; citations in the application on p. 1 and 2, e.g. *DE 29609958U1=D3*), thus *already providing a solution* for the problem underlying the present application.

The storage of specific diagnostics, namely *a non-radioactive metal complex or a hyperpolarised material* in silica-coated containers in order to *prevent the adverse affection* of the diagnostics can be derived from the prior art (no unexpected effect) and thus only represents a *further possible use* of the *already known containers*.

- 3.5 Thus, an **inventive step** can presently **not be acknowledged** for the subject-matter of claims 1-9.

4. Industrial Applicability (Art. 33(4) PCT)

The requirements of industrial applicability are **fulfilled** for claims 1-9.
